

UPDATE

DESIGNED FOR THE RACER DESIGNED FOR THE RACER DESIGNED FOR THE RACER DESIGNED FOR THE RACER DESIGNED FOR THE RACER

Presenting: The Next Generation Of Pit Carts From CTECH...

The Ultra Cart™

Newly designed and engineered, the "Ultra" has been in development for over two years. At **CTECH**, it's always worth the effort because of the final result...satisfied customers. Race teams looking for a competitive edge are the reason we continually strive to improve concepts and provide the best looking, most efficient, quality built carts and cabinets available anywhere. We hope you enjoy the "Ultra".

Ultra Cart™ Overview & Details:

Chassis Platform

The entire monocoque frame is built of aluminum with steel only used for supports and spindles. This chassis design is extremely strong, offering tremendous weight savings and rigidity for heavier loads.

Zero Scrub Steering Design

This exciting new design makes steering and motion effortless. Combined with 4-wheel Ackerman steering, and Urethane run flat tires, the "Ultra" moves easily on Custom billet wheels.

Pull And Stow™ Handle

The pull handle's unique design placement minimizes the effort of pulling the cart, as all the energy is directed forward, not upward. Add the unique Pull&Stow™ handle design, and you've created another clean panel for branding or advertising for sponsors.

Recessed Self Leveling Stabilizers

Electric over hydraulic stabilizers automatically level the Ultra Cart providing stability and security on pit lane, or in the shop.

Ultra Media Deck™

This highly engineered upper platform features **CTECH's** exclusive Ultra Media Deck™. The Ultra Deck offers racers a fast, efficient set up for data acquisitions and monitors, as well as provides additional media seating.
